The right spare parts services for the entire drive train

Integrated Drive Systems – an entirely new view of drive systems
Siemens Integrated Drive Systems (IDS) are a solution for entire drive systems. They noticeably speed up time to market and thus also time to profit. By seamlessly integrating them into every drive system, every automation environment and even into the entire lifecycle, Siemens Integrated Drive Systems turn single drive components into real drive systems and single investment goods into drivers of success. Siemens Integrated Drive Systems are certain to change how you look at drive systems.

High availability thanks to Spare Parts Services for Integrated Drive Systems
With Spare Parts Services for Integrated Drive Systems, Siemens ensures the availability of original spare parts directly from the manufacturer for up to 10 years after products are discontinued. Siemens also delivers the parts quickly worldwide and offers solutions for spare parts concepts before they are even needed, tailoring them to the customer’s specific needs. Our global Customer Care Center makes sure that everything runs smoothly, which minimizes unscheduled drive train down times.

»With Spare Parts Services for Integrated Drive Systems, our customers can minimize unscheduled downtimes and maximize availability.«

Christian Tewes
Many original spare parts from Siemens are available up to 10 years after a product is discontinued – all over the world. In an emergency, Siemens does everything in its power to make sure that the customer receives the spare parts as quickly as possible. Defective parts can be returned for replacement. Siemens makes recommendations to reduce the individual risks of unscheduled down times.
Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer’s premises with optimized spare parts packages for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.
With individual spare parts concepts, Siemens helps increase the efficiency of spare parts provisioning over the long term. An optimized inventory makes it possible to respond quickly at all times and to keep production up and running. Siemens can arrange for storage of all other spare parts on an individual basis and deliver them quickly to the customer’s plant. A closely meshed global infrastructure of local Siemens workshops and service offices ensures maximum availability.
Siemens Industry Services offer:

- Retrofit and Modernization Services
- Repair Services
- Field and Maintenance Services
- Training Services
- Support and Consulting Services
- Plant Data Services

Services for Integrated Drive Systems

In addition to Spare Parts Services for Integrated Drive Systems, Siemens also provides a wide range of other services to keep plants and machinery running reliably.

Optimized spare parts stock

In concrete terms, optimizing the stock of spare parts helps lower costs and maximize plant availability.
Plants and machinery have to run continuously – in every industry and all over the world. A missing spare part can bring the entire plant to a standstill and cause the operators to sustain substantial financial loss. With its Spare Parts Services for Integrated Drive Systems, Siemens can assist in these situations by delivering original spare parts quickly.

Optimize your spare parts maintenance with Spare Parts Services for Integrated Drive Systems.

**Spare parts on demand** – Fast support when you need spare parts

**Spare parts packages** – Provision of product- or plant-specific spare parts packages

**Spare parts concepts** – Individual solutions for spare parts availability based on a risk analysis conducted together with the customer
Experience Spare Parts Services for Integrated Drive Systems as part of our Services for Integrated Drive Systems, thus minimizing down times and maximizing availability.
